System PHP Settings:

```
max_execution_time = 300
memory_limit = 64MB
register_globals=off
safe_mode=off
upload_max_filesize=20M
```

Shell Access Policy

Shell Access is available upon request. Before granting Shell Access, we require that your Billing Credit Card be kept on file. We will also require a signed photocopy of the Credit Card and the card holder's valid Driver's License.

eCommerce Policy

We allow hosted web sites to perform on-site credit card processing, however we do require notification. We also require documentation of the software used, software version number, and the merchant gateway. We will accept a support incident describing the eCommerce application (and aforementioned items) as notification and documentation. An additional notification is required whenever the software is upgraded, changed, or a different or new merchant gateway is configured.

Perpetual Progress reserves the right to reject any eCommerce software or merchant gateway found to have security concerns. Perpetual Progress may, upon periodic review, demand an upgrade of the eCommerce software or merchant gateway settings to ameliorate security concerns.
